

All energy labels carry the following information:

- Brand name
- Supplier's model number
- Energy efficiency class.

All labels include energy consumption information. It indicates how many kilowatt hours (units of electricity) will be used per year, per hour or per cycle under specified operating conditions. To estimate costs, simply multiply the kWh number by the cost of a unit of electricity (currently around 40c).

Understanding the labelling on

Televisions & Monitors

Electronic displays can include televisions, computer monitors and other digital signage displays. The label should be displayed in a clearly visible position on front of the product. Affixing energy labels to electronic displays can result in peeling off or residue marks.

Affixing the label to an acrylic point of sale display and hung on the front of or displayed directly adjacent to the product will satisfy the requirements.
